

DME-CGM-v4: Continuous Glucose Monitoring Systems

Summit Care Medical Policy

Policy Number: DME-CGM-v4

Effective Date: January 1, 2026

SCOPE: Coverage of continuous glucose monitoring (CGM) systems.

MEDICAL NECESSITY CRITERIA. CGM is considered medically necessary when the member meets at least ONE of the following:

1. Diagnosis of Type 1 diabetes mellitus.
2. Diagnosis of Type 2 diabetes mellitus AND ALL of the following:
 - (a) Treated with three or more insulin injections per day OR with an insulin pump;
 - (b) Requires frequent self-monitoring of blood glucose (four or more fingerstick tests per day);
 - (c) Meets at least one of the following: (i) A1c greater than or equal to 8.0%; (ii) documented history of one or more episodes of severe or problematic hypoglycemia; (iii) hypoglycemia unawareness.
3. Pregnant with any form of diabetes mellitus requiring insulin.

NOTE: CGM policy was expanded in version 4 to include insulin-intensive Type 2 diabetes. Earlier denials that referenced Type 1 requirement only are no longer consistent with current policy.
